## **Fakro Window Sets New Standard of Burglary Protection**

*Product developments in the roof window sector continue to influence style and functionality in equal measure. In addition to setting new standards of thermal efficiency and airtightness, however, FAKRO has launched the FTP-V P2 Secure roof window to provide a previously unseen level of burglary protection.*

The FTP-V P2 Secure not only utilises the company's unique topSafe system of hinge and lock reinforcement but Class P2A laminated anti-burglary glass, a system to prevent the glazing unit from being broken and an additional safety lock.

Thirteen sizes are available in both standard and conservation style, with all having an automatic vent to prevent unnecessary heat loss.

### **Ends**
