Safeguarding lives with The Safety Letterbox Company SIB

Following the Grenfell Tower tragedy, the UK government implemented stringent fire safety standards, particularly for high-rise and multi-occupied residences. In response to this critical need for building safety, The Safety Letterbox Company introduces the Secure Information Box (SIB), a vital tool for emergency services.

In emergencies where every second counts, the SIB plays a crucial role by providing firefighters with essential information to make rapid decisions. From floor plans and access routes to details about vulnerable residents and building materials, the SIB holds critical data that can be lifesaving.

The design of the SIB is paramount, ensuring it is robust enough to withstand vandalism and tampering while protecting sensitive personal data. Built in the UK to the highest security standards, SIBs weigh 22 kilograms and are constructed from 2mm and 4mm thick steel, equipped with multi-point locking mechanisms.

Certified to stringent security standards (STS205 Issue 5: 2015 Resistance Class BR2), SIBs are tamper-and-vandal-proof, providing ongoing protection for sensitive information even in challenging situations. Our Secure Information Box is both British-made and Secured by Design certified, ensuring reliability when it truly needs to perform.

Do not take a risk with your SIB solution – call on 01639 633 525 or email enquiries@safetyletterbox.com to learn more about how they can help safeguard lives and information alike. Trust The Safety Letterbox Company for secure solutions designed to protect in critical situations.
