## **ACO launches a new range of access covers**

***ACO ACCESS has launched a range of high quality floor access covers designed for use in internal and external applications in commercial, private and public sector buildings. The new range is available from ACO Building Drainage.***

Designed to provide easy access to underlying building services and ducting, ACO UniFace™ recessed covers and ACO UniTop™ solid covers are available in a choice of materials including aluminium, hot-dipped galvanised steel and stainless steel grade 304 as standard. Covers can also be manufactured in stainless steel grade 316 if required.

Access covers are fully certified to BS EN 1253-4 and BS EN 124 European standards and are available in a comprehensive range of standard clear opening sizes from 200mm to 1200mm. To ensure easy specification, all ACO ACCESS covers also use Fabricated Access Cover Trade Association (FACTA) classifications.

Rob King, ACO ACCESS Business Manager, comments: "ACO is synonymous with quality, innovation and great design, and these qualities are reflected in our new range of floor access covers. Our manufacturing expertise, design capabilities and the support of our in-house technical design team have enabled us to produce a range of access covers which deliver both function and style to customers working in a wide range of building applications."

ACO UniFace™ recessed floor covers are designed to blend with a wide range of hard and flexible floor infills of up to 15mm thickness. Suitable for use in pedestrian, light vehicle and medium duty fork-lift applications they are ideal for use in offices, shopping centres, leisure centres and schools.

ACO UniTop™ solid floor covers provide contrasting aesthetics in hard floor and pavement finishes, and, for optimum safety in use, have a raised slip-resistant surface. Designed for pedestrian and light vehicle applications, ACO UniTop™ access covers are commonly used in warehouses, manufacturing facilities and commercial kitchens.

All ACO Access floor covers are fitted with both liquid and odour-tight EPDM seals as standard, come with stainless steel locking screws for added security and can be supplied with manual lift or gas spring assisted opening options. Bespoke solutions are also available to meet individual project requirements. ACO Access covers can also be supplied as single units or for ductings and multi span applications.

For more information, contact the technical design team on 01462 810400.
