## **Delta Launch Online Sump Pump Specification Guide**

***Delta Membrane Systems Limited, are delighted to announce the launch of their new Online Sump Pump Specification Guide, simplifying the process in identifying suitable sump pumps and storage capacities of chambers for groundwater, surface water and foul water packaged pumping stations.***

Delta's Online Sump Pump Specification Guides can be found at  
<https://www.deltamembranes.com/product-categories/pump-calculators/>.

Drainage capacity and sump pump performance is an essential element in determining the success of drainage and pump station design, to simplify the process we have created a tool which assists the process.

### **3 Easy Ways to Access Product Technical Information**

The Sump Pump Specification Guide is split into three sections:

- **Groundwater**
- **Surface Water**
- **Foul/grey Water**

Simply input the technical information to the various fields of the Specification Guide and the Specification Guide will highlight a product suitable for the drainage requirements of your project. Pump selection is based on optimum/ideal performance of the sump pump based on the pump's performance curve.

From this, simply click on the product selected to access full product functions your design team and product team members need. All products have links to clear and easily readable and downloadable install guides, product data sheets, CAD details, brochures, fabrication sheets and "how to" video guides.

Basement Drainage 'sump pump systems' should be engineered to cope with worst-case scenario of water ingress. Delta have been providing customers with high-quality basement drainage solutions for nearly 30 years. In that time their friendly, knowledgeable team has been offering technical advice, free specifications, and a helpful flow calculation service to customers.

There are lots of resources on Pump Station Design, but this step-by-step Specification Guide will provide you with the tools and strategies you need to create a reliable, data-backed approach for your project. Knowing which pump(s) work best for your project can simplify how products are specified, giving you confidence knowing that you are not simply guessing.

Whilst Delta's new Sump Pump Specification Guide is a great feature, they will still be offering the same in-person services for which we are renowned for. Delta's team of Pump Specification Technicians will be on hand to assist and facilitate correct specification of sump pumps and packaged pumping stations. Every product specification provided by the Delta team is based on technical requirements, engineering specifications, and other details that are specific to the project.
