Large projects keep Grassform trackway teams busy

Large infrastructure projects have been keeping the team at Grassform Group busy, providing trackway materials.

A major renewable energy project needed access roads and temporary compound areas to enable maintenance work to be done on a transmission tower and battery storage upgrades on a nearby solar farm.

The Grassform team installed Tufftrak boards over a large area and for this project, the Grassform Monster Truck came out, speeding up install times by ferrying boards to the laying points and increasing productivity! This monster truck can be hired as a package with a driver to minimise the client's footprint on site and vehicle movements.

Other installations include Tufftrak temporary roadways, complete with full geo textile underlay, providing safe heavy-duty access for lorries & cranes to several remote Network Rail locations. Also, 3500m² of trackway compounds on a large Fusion HS2 project with RSK Group.
