IQ Glass launches express design service for slim sliding doors

IQ Glass is excited to unveil a new express design service, specifically tailored for standard configurations of its slim sliding glass doors. This service promises a faster turnaround for design details and an overall reduction in lead times, providing a streamlined and efficient solution for projects.

Standard Configurations

Ideal for projects with predefined construction sizes, IQ Glass's express design service eliminates the need for a survey. Simply provide the required sizes, and the design phase kicks off immediately, ensuring the quickest possible turnaround. Their knowledgeable team can guide you on the necessary structural elements for the glass doors, with seamless integration into your builder's plans once steel deflections are approved.

Fully flush thresholds and concealed framings are not just options – they are integral features of their slim sliding glass door typical design details.

Design Your Way

To take advantage of the express design service for sliding doors, it is crucial to finalize your design choices beforehand. Ensure you have selected the RAL colour for the frame, determined the locking location, and chosen drainage options before entering the 'design phase.' This information is vital to kickstart the fast-track design service effectively.

Fast Track with IQ

Once you provide all the necessary information, IQ's typical design service will take a mere 1 to 2 weeks. Experience the efficiency of our express design service by reaching out to the IQ team with your requirements, including:

- Dimensions for the doors
- Frame colours
- Required glass specifications
- Design options such as locks, direction of travel, and more

Make your project a testament to speed and precision with IQ Glass's Express Design Service for sliding doors.
