Maccaferri experts to present webinars

Maccaferri is giving everyone involved in rockfall protection, ground reinforcement and soil stabilisation the opportunity to gain extra technical knowledge and learn new techniques through webinars delivered by experts on specific topics.

The webinars will give participants the option to gain a CPD certificate.

The first webinar will be Thursday, October 1st at 12:30pm in which Maccaferri expert Dr Dave Cheer will be talking about Rockfall Protection and Hazard Mitigation solutions. Using project examples, he will present an overview of the Maccaferri range of rockfall protection meshes and design software.

The webinar will introduce each of the meshes within the Maccaferri range, cover technical aspects of their construction and use, plus their associated proprietary accessories. The presentation will cover design considerations of the Maccaferri meshes, the in-house software and how the meshes can be used within the context of the new CIRIA C775 guide.

For more details about the webinars, contact Maccaferri on 01865 770 555 or email the team at info.uk@maccaferri.com
