Mastering garage doors with Rundum Meir for a seamless look

Ever thought about seamlessly integrating your garage door into your building's façade until it practically vanishes? This remarkable design concept becomes a reality when you choose custom-made garage doors from Rundum Meir. Crafted from materials that harmonize with your building's surroundings, these bespoke doors create a genuinely inconspicuous integration.

The results of this seamless integration are stunning, creating a frameless appearance that blends seamlessly with the wall. The creative possibilities are endless, thanks to Rundum Meir's four types of doors. These doors can mimic the vertical or horizontal lines found in other architectural elements, ensuring visual consistency.

For instance, Rundum Original 'round the corner' doors and side sectional garage doors are perfect for matching vertical lines like timber cladding. In a notable project by Rundum Meir (as shown in the main photo of this article), timber cladding on batten-style spans across the building's width at the ground floor, cleverly concealing the side sectional garage door.

Another example showcases a façade-integrated door, achieved using a Rundum Original side sliding door. This door's ability to curve around corners facilitates intriguing building designs. In a German municipal building, which houses a vehicle storage and road grit hall at a motorway maintenance depot, a grey timber-clad side opening door on the building's corner blends seamlessly with the structure's curved design, almost disappearing when closed.

Opting for a bespoke overhead sectional garage door or a one-piece 'up and over' door unlocks even more creative potential. These doors can seamlessly blend into your façade, clad in the same materials as the rest of your building's exterior or other architectural features, effectively concealing the garage's existence.

Rundum Meir offers these doors in various materials, including timber and aluminium, and they can be clad with surface materials such as Corten steel, bronze, copper, zinc, composite façade panels, and even glass.

With over 50 years of experience in pushing the boundaries of garage door design and manufacturing, Rundum Meir is the perfect partner to help architects, specifiers, and clients achieve their desired results. Their UK design and installation team supports customers from the initial inquiry, providing unrivalled aftercare to ensure the aesthetic and functional performance of every Rundum Meir door is maintained over the long term.
