Safety Letterbox prepares for the Christmas deliveries

Over the last couple of years E-commerce has been fast growing and ever changing the way consumers shop. In 2020 alone, UK consumer spend online shot up a massive 34.7% as digital transformation switched from buzzword necessity. (Royal Mail 2022)

Last Christmas the parcel delivery hit an all time high in the UK. This Christmas its predicted to have a lot more parcel deliveries.

The Safety Letterbox Company offer a few different parcel box solutions suitable for individual homes, multi-occupancy and even business and office complexes.

Individual Homes

The MEFA Beech is a parcel delivery box that can securely store up to 47 litres of mail and parcels at once. This particular variation of the MEFA Beech parcel box, is an in front / out front type which accepts items at the front, and also allows for retrieval of mail at the front via an opening door.

Multi Occupancy

Introducing the fully tested and certified Fire rated parcel range – myRENZbox Modula – 2 Hour Fire Rated Parcel Boxes.

As a UK leading mail and parcel manufacturer, we invest in continuous innovation, R&D to bring new, specification led and conforming products to the market with the highest of standards.

These 2hr fire rated parcel boxes are able to contain, or, hold back a fire for 120 mins. Tested by Warrington Fire in accordance with BS EN 1363-1: 2020.

They can be installed wall mounted, wall recessed, through the wall or freestanding.

Office & Retail

Part of the Classic range, MODULA is a fully scalable intelligent parcel box system with proven functionality that is competitively priced. The combination of hardware and unique RENZ software platform enables full automation of the parcel delivery, collection and returns process.

At the 'heart' of this scalable system is a choice of two standalone control modules with the option of a further nine parcel extension modules. The system can be extended to manage up to 500 box compartments with electronic locks operated from a single controller.

Extension modules are simply added to the control module to match the exact project requirements. We provide guidance to help configure the specific number and size distribution of parcel boxes required for each project.

In addition to the standard processes, Safety Letterbox can also provide expert technical support to integrate with building management software, electronic door entry systems and to comply with existing organisational protocols.

The MODULA Parcel box system is connected to an online software portal at www.myrenz.com. The system portal enables remote management by the system owner. Registered users can also login to a user portal to manage their individual accounts.

Safety Letterbox are extremely passionate about creating innovative, yet practical, high quality mail and parcel box solutions, blending aesthetics and security to offer the ultimate product. Since 1986, they have built a strong reputation in the market as a quality British manufacturer supplying both B2B and B2C markets in the UK and around the world, with a UK team that truly believes in going the extra mile for our customers.
